The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/779,837

Applicant(s)

FEINBERG ET AL.

Examiner

JAKIEDA R. JACKSON

Art Unit

2626

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 June 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 and 18-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-16 and 18-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/5508)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Response to Amendment

1. In response to the Office Action mailed March 13, 2009, applicant submitted an amendment filed on June 29, 2009, in which the applicant amended and requested reconsideration.

Response to Arguments

2. Applicant argues that the prior art cited does not specifically teach the claims as amended. In particular, that the prior art does not specifically teach a method wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters, the plurality of rows equal to a maximum number of buttons displayable in the jump bar, wherein each button of the plurality of buttons of the jump bar is associated with first and second alphanumeric characters of different languages. Applicant's arguments are persuasive, but are moot in view of new grounds of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1-3, 5-6 and 8-9** are rejected under 35 U.S.C. 103(a) as being unpatentable over Babst et al. (USPN 7,194,404), hereinafter referenced as Babst in view of Robertson et al. (PGPUB 2006/0277213), hereinafter referenced as Robertson and in further view of Cottte (PGPUB 2004/0148351).

Regarding **claim 1**, Babst discloses a method of operating a jump bar of a contact manager, comprising the steps of:

assigning a character code to a button of the jump bar (character code), wherein the character code is uniquely associated with an alphanumeric character of a character set having a single character code (input character; column 9, lines 16-57) uniquely associated with each alphanumeric character of a plurality of alphanumeric characters from a plurality of languages (languages; column 12, lines 36-63); and

displaying the retrieved contact information in a window of the contact manager (display; column 6, line 30 - column 7, line 30), but does not specifically teach retrieving contact information from a contacts information database by comparing the assigned character code and the first alphanumeric character of the last names of contacts having associated contact information previously stored in the contacts information database and wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters, the plurality of rows equal to a maximum number of buttons displayable in the jump bar, wherein each button of the plurality of buttons of the jump bar is associated with first and second alphanumeric characters of different languages.

Robertson discloses a method of retrieving contact information from a contacts information database (address book interface) by comparing the assigned character code (letter) and the first alphanumeric character of the last names of contacts (last name) having associated contact information previously stored in the contacts information database (paragraphs 0077-0083 with figure 10), to easily locate and share personal information with other users.

Therefore, it would have been obvious to one of ordinary skill of the art to modify Babst's method as described above, to conduct a search of contacts of the respective user and the search may be limited in scope to users that satisfy one or more particular search criteria, such as users that reside in a particular region or are affiliated with a particular group (paragraph 0012), as taught by Robertson.

Babst in view of Robertson discloses a method of operating a contact manager, but does not specifically teach wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters, the plurality of rows equal to a maximum number of buttons displayable in the jump bar, wherein each button of the plurality of buttons of the jump bar is associated with first and second alphanumeric characters of different languages.

Cotte discloses a method of operating a contact manager (paragraph 0372) wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters (figures 16.01-16.11), the plurality of rows equal to a maximum number of

buttons displayable in the jump bar (paragraph 0223), wherein each button of the plurality of buttons of the jump bar is associated with first and second alphanumeric characters of different languages (languages; paragraphs 0095 and 0131), to jump to the selected person to be called.

Therefore, it would have been obvious to one of ordinary skill of the art at the time the invention was made to modify Babst in view of Robertson's method as described above, to jump to the selected person to be called according to the alphabet buttons on the table (paragraph 0223), as taught by Cotte.

Regarding **claim 2**, Babst discloses a method wherein the method further comprises a step of selecting the character code assigned to the button of the jump bar based at least in part upon the usage frequency (frequently used) of the associated alphanumeric character in the respective language thereof (column 9, lines 36-57).

Regarding **claim 3**, Babst discloses a method wherein the method further comprises a step of determining respective weights (high and low) for the alphanumeric characters of the plurality of alphanumeric characters (column 9, lines 36-57).

Regarding **claim 5**, Babst discloses a method wherein the assigned character code is a first character code and the button is a first button of the jump bar, wherein the first character code is associated with a first language, and wherein the method further comprises a step of assigning a second character code associated with a second language to a second button of the jump bar (figure 1).

Regarding **claim 6**, Babst discloses a method wherein the assigned character code is a first character code associated with a first language (column 9, lines 36-57),

and wherein the method further comprises a step of assigning a second character code associated with a second language to the button of the jump bar (languages; column 15, lines 51-58).

Regarding **claim 8**, Babst discloses a method of assigning character codes, but does not specifically teach wherein the character code is a first character code, and wherein the method further comprises a step of assigning a second character code to the button of the jump bar in response to re-sizing of the window of the contact manager by a user.

Robertson discloses a method wherein the character code is a first character code, and wherein the method further comprises a step of assigning a second character code to the button of the jump bar in response to re-sizing of the window of the contact manager by a user (figure 10), to easily locate and share personal information with other users.

Therefore, it would have been obvious to one of ordinary skill of the art to modify Babst's method as described above, to conduct a search of contacts of the respective user and the search may be limited in scope to users that satisfy one or more particular search criteria, such as users that reside in a particular region or are affiliated with a particular group (paragraph 0012), as taught by Robertson.

Regarding **claim 9**, Babst discloses a method wherein the first character code has a first numeric value, wherein the second character code has a second numeric value, and wherein the second numeric value is numerically greater than the first numeric value (figure 5).

5. **Claim 4** is rejected under 35 U.S.C. 103(a) as being unpatentable over Babst in view of Robertson and Cotte and in further view of James et al. (PGPUB 2005/0198023), hereinafter referenced as James.

Regarding **claim 4**, Babst in view of Robertson and Cotte disclose a method of data entry for Indic languages, but does not specifically teach wherein the step of displaying the retrieved contact information includes displaying retrieved contact information in groups corresponding to the languages of the retrieved contact information.

James discloses a method wherein the step of displaying the retrieved contact information (address book) includes displaying retrieved contact information in groups corresponding to the languages of the retrieved contact information (paragraphs 0008-0009 and 0029-0033), to allow a user to choose the intended item if more than one interpretation is possible.

Therefore, it would have been obvious to one of ordinary skill of the art to modify Babst in view of Robertson and Cotte's method as described above, to simultaneously use two or more languages in a single message or entry field (paragraph 0008), as taught by James.

6. **Claims 10-14** are rejected under 35 U.S.C. 103(a) as being unpatentable over Babst in view of Robertson and Flazsa et al. (PGPUB 2003/0233340), hereinafter referenced as Flazsa and in further view of Cotte.

Regarding **claim 10**, Babst discloses system, comprising:

wherein each button is associated uniquely with a character code corresponding to an alphanumeric character of a character set having a single character code uniquely associated with each alphanumeric character of a plurality of languages (figure 1); and a computer software routine (software) including a plurality of executable instructions (column 21, lines 31-48), said computer software routine being operable to uniquely associate buttons of said plurality of buttons with character codes corresponding to alphanumeric characters of said character set (figure 1), but does not specifically teach a plurality of buttons displayable in a graphical user interface window of a contact manager and a button data table including a character code and associated weight for each of a plurality of alphanumeric characters that are assignable to the buttons of the plurality of buttons and wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters, the plurality of rows equal to a maximum number of buttons displayable in the jump bar, wherein each button of the plurality of buttons of the jump bar is associated with first and second alphanumeric characters of different languages.

Robertson discloses a system comprising a plurality of buttons (buttons) displayable in a graphical user interface window of a contact manager (figure 10 with paragraphs 0077-0082), to easily locate and share personal information with other users.

Flasza discloses a system wherein a character code (character code) and associated weight (weight) for each of a plurality of alphanumeric characters (figure 2 with paragraphs 0019-0022), for sorting data.

Cotte discloses a method of operating a contact manager (paragraph 0372) wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters (figures 16.01-16.11), the plurality of rows equal to a maximum number of buttons displayable in the jump bar (paragraph 0223), wherein each button of the plurality of buttons of the jump bar is associated with first and second alphanumeric characters of different languages (languages; paragraphs 0095 and 0131), to jump to the selected person to be called.

As shown above, all the steps claimed in claim 10 were known in the prior art, as evidenced in the above references, and one skilled in the art could have combined the claimed steps by merely adding them together, with no change in their respective functions, and the combination would have yielded predictable results or the sum of the respective functions, to one of ordinary skill in the art at the time of the invention, *KSR International Co. v. Teleflex Inc.*, 550 U.S.--, 82 USPQ2d 1385 (2007). Accordingly, the combination of Babst, Robertson, Flasza and Cotte would have been obvious to one of ordinary skill in the art at the time of invention.

Regarding **claim 11**, it is interpreted and rejected for similar reasons as set forth in claim 10. In addition, Robertson discloses a system wherein said computer software

routine is further operable to update said graphical user interface window of said contact manager with contact information (figure 10).

Regarding **claim 12**, Babst discloses a system wherein said weight for each of said plurality of alphanumeric characters is based at least in part on the usage frequency (frequently used words) of each said alphanumeric character within the language thereof (column 9, lines 36-57).

Regarding **claim 13**, Babst discloses a system wherein said computer software routine is operable to uniquely associate a character code of a first alphanumeric character of a first language with a first button of said plurality of buttons and to uniquely associate a character code of a second alphanumeric character of a second language with a second button of said plurality of buttons (figure 1).

Regarding **claim 14**, Babst discloses a system wherein said computer software routine is operable to uniquely associate a character code (code; column 9, lines 36-57) of a first alphanumeric character of a first language with a button of said plurality of buttons (figure 1) and to uniquely associate a character code of a second alphanumeric character of a second language with said button of said plurality of buttons (column 9, lines 36-57).

7. **Claims 16 and 18-20** are rejected under 35 U.S.C. 103(a) as being unpatentable over Flasz in view of Robertson and Babst and in further view of Cotte.

Regarding **claim 16**, Flaszka discloses a method of operating a jump bar of a contact manager, comprising the steps of:

associating a weight (weight) with each character code (character code) of a plurality of character codes corresponding to respective alphanumeric characters of a language, wherein each character code of the plurality of character codes uniquely (unique number) corresponds in a one-to-one relationship to an alphanumeric character of a character set representing a plurality of alphanumeric characters of a plurality of languages, wherein the character codes associated with each language of the plurality of languages are arranged as respectively contiguous ranges of numbers (paragraph 0020);

selecting character codes from the plurality of character codes for association with respective rows of a plurality of rows of a table (figure 1);

storing the selected character codes (code point) and associated weights in the table with each row of the table storing a character code and associated weight (weight; figures 2 and 3), but does not specifically teach identifying character codes of the selected character codes for display on buttons of a jump bar of a contact manager; and, displaying the alphanumeric characters corresponding to the identified character codes on respective buttons of the jump bar wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters, the plurality of rows equal to a maximum number of buttons displayable in the jump bar, wherein each button of the plurality of

buttons of the jump bar is associated with first and second alphanumeric characters of different languages.

Robertson teaches a method of identifying character codes of the selected character codes for display on buttons of a jump bar of a contact manager; and, displaying the alphanumeric characters corresponding to the identified character codes on respective buttons of the jump bar (paragraphs 0077-0083 with figure 10), to locate and share personal information with other users.

Babst discloses a method wherein associating a weight includes determining a frequency with which an alphanumeric character is used in the language (frequency) thereof and assigning the weight based at least on the determined frequency (high, low; column 9, lines 36-57), to speed up word prediction.

Cotte discloses a method of operating a contact manager (paragraph 0372) wherein the jump bar comprises a button data table including a plurality of rows comprising at least a plurality of character codes for the plurality of alphanumeric characters (figures 16.01-16.11), the plurality of rows equal to a maximum number of buttons displayable in the jump bar (paragraph 0223), wherein each button of the plurality of buttons of the jump bar is associated with first and second alphanumeric characters of different languages (languages; paragraphs 0095 and 0131), to jump to the selected person to be called.

As shown above, all the steps claimed in claim 10 were known in the prior art, as evidenced in the above references, and one skilled in the art could have combined the claimed steps by merely adding them together, with no change in their respective

functions, and the combination would have yielded predictable results or the sum of the respective functions, to one of ordinary skill in the art at the time of the invention, *KSR International Co. v. Teleflex Inc.*, 550 U.S.--, 82 USPQ2nd 1385 (2007). Accordingly, the combination of Babst, Robertson, Flasz and Cotte would have been obvious to one of ordinary skill in the art at the time of invention.

Regarding **claim 18**, Flasz discloses a method wherein the step of selecting character codes includes selecting character codes from the plurality of character codes (character code) based at least in part on the weights (weight) associated with the character codes (paragraph 0019-0022).

Regarding **claim 19**, Flasz discloses a method wherein the selected character codes have associated weights which are greater than the associated weights (weight) of other character codes (character code) of the plurality of character codes (paragraph 0019-0022).

Regarding **claim 20**, it is interpreted and rejected for similar reasons as set forth in claim 16. In addition, Flasz discloses a method wherein the step of identifying character codes includes identifying character codes (character code) based at least in part on the weights (weight) associated with the character codes (paragraph 0019-0022).

8. **Claim 7** is rejected under 35 U.S.C. 103(a) as being unpatentable over Babst in view of Robertson and Cotte and in further view of Atkin et al. (PGPUB 2004/0181176), hereinafter referenced as Atkin.

Regarding **claim 7**, Babst in view of Robertson and Cotte disclose a method of operating a jump bar of a contact manager, but does not specifically teach wherein the plurality of languages includes an Indic language.

Atkin discloses a method wherein the plurality of languages includes an Indic language (Indic; paragraph 0039), to make use of complex character sets.

Therefore, it would have been obvious to one of ordinary skill of the art at the time the invention was made to modify Babst in view of Robertson and Cotte's method as described above, to allow a user to select the character set that the user wishes to make use of with application (paragraph 0038), as taught by Atkin.

9. **Claim 15** is rejected under 35 U.S.C. 103(a) as being unpatentable over Flaszka in view of Robertson, Babst and Cotte and in further view of Atkin.

Regarding **claim 15**, Flaszka in view of Robertson, Babst and Cotte disclose a method of operating a jump bar of a contact manager, but does not specifically teach wherein the plurality of languages includes an Indic language.

Atkin discloses a method wherein the plurality of languages includes an Indic language (Indic; paragraph 0039), to make use of complex character sets.

Therefore, it would have been obvious to one of ordinary skill of the art at the time the invention was made to modify Flaszka in view of Robertson, Babst and Cotte's method as described above, to allow a user to select the character set that the user wishes to make use of with application (paragraph 0038), as taught by Atkin.

Regarding **claim 21**, Flasza in view of Robertson, Babst and Cotte disclose a method of operating a contact manager, but does not specifically teach a method wherein the character set includes the Unicode character set.

Atkin discloses a method wherein the character set includes the Unicode character set (Unicode; paragraph 0039), to understand languages which are written using Indic fonts.

Therefore, it would have been obvious to one of ordinary skill of the art to modify Flasza in view of Robertson, Babst and Cotte's method as described above, to provide a Unicode capable application without requiring modification of legacy operating systems (paragraphs 0006-0007), as taught by Atkin.

Conclusion

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JAKIEDA R. JACKSON whose telephone number is (571)272-7619. The examiner can normally be reached on Monday-Friday from 5:30am-2:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Hudspeth can be reached on 571-272-7843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
